

## STORAGE GUIDE FOR GRABO SPRINGAIR SPORTS PARQUET FLOORS

### STORAGE AND TRANSPORTATION

#### Parquet flooring:

The parquet boards are supplied bundled and packaged in shrinkable film. They should be stored and shipped in batches, strapped to pallets. No more than two batches can be safely stacked for shipment and maximum three batches can be piled up for storage. Please, store the product in its original packaging until use!

#### Underlay components:

The underlay components are supplied in sheets. They are rolled, arranged on pallets and packaged in shrinkable film for shipping. Not more than two batches can be safely piled up for shipment and storage. Please, store the product in its original packaging until use!

### STORAGE PLACE AND CONDITIONS

The packaging has been designed to protect the product from moisture and dirt. However, it is customer's responsibility to ensure the safe-keeping and integrity of the product.

By observing the simple rules below you can contribute to the long life of your purchased product:

- ↻ keep the product in a dust-free, well-ventilated and dry storage;
- ↻ ensure a stable storing temperature between +5°C and +40°C;
- ↻ the optimal indoor relative humidity for timber products is 40–60%.

### INSTALLATION TECHNOLOGY

#### Sub-flooring requirements:

- ↻ the sub-flooring must be clean and dust-free;
- ↻ it should be permanently dry;
- ↻ the surface should be flat and smooth.

Before and during parquet installation the sub-flooring must be clean and dust-free. This will help to prevent the later instability and displacement of the underlay. Dust mopping and vacuum cleaning are simple and efficient ways of maintaining the proper condition of the sub-flooring.
