

Manual cleaning

Common parquet care products, e.g. Wood Floor Cleaner (Dr. Shutz), can be recommended for this job. They are perfect to preserve the original shine of the wooden surfaces, dry quickly and do not leave streaks or film after drying.

Machine cleaning

Both portable equipment and self-propelled automatic machinery is used for routine cleaning of Grabo floorings. Ask the supplier of this equipment for advice concerning the detergents and attachments suitable for application on parquet floors. It is important that paddles of water should not be left on the parquet surface for a long time during machine cleaning; it is therefore advisable to work with a damp brush.

SURFACE PROTECTION OF THE GRABO SPORTS PARQUET FLOORS

It is advisable to use temporary shielding in order to protect the valuable Grabo sports parquet floor during sporting events. For this purpose Graboplast Ltd. has developed a special product named ProtectoSport.

With the help of the rolling and unrolling device manufactured by the Janser Company this protective shielding can be easily spread on top of the sports floor and collected after use. The unrolled strips of ProtectoSport are laid beside one another and fastened by double-sided adhesive tape.
