

# ...with CLP

Our aim is to keep the main technical parameters during the whole lifetime of the flooring. In order to reach it, we have developed an innovative top layer composition called Cross Linked Polymer System (CLP).

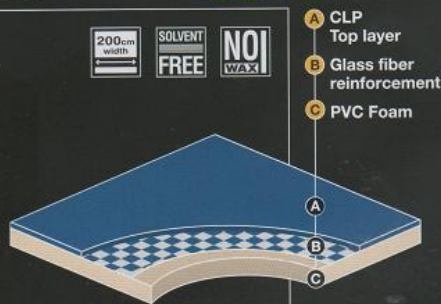

Due to the high density of the chemical cross links, on one hand CLP reduces the

adhesion of the contamination on the surface, **improving the cleanability**, on the other hand **increases the wear resistance** thus the lifespan of the flooring. Thanks to CLP our floors preserve their surface properties (slip, cleanability, gloss) for a long time.

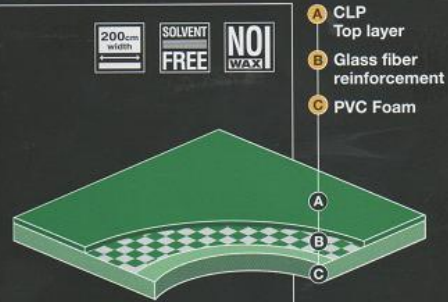

## graboflex Start

Width EN426	200 cm
Standard roll length EN426	20 m ± 10%
Thickness EN428	4,0 mm

## grabo Rocket

Width EN426	200 cm
Standard roll length EN426	15 m ± 10% 20 m ± 10%
Thickness EN428	3,8 mm

Sport flooring specially for badminton and for table tennis
