

the ultimate performance

Innovative Surfaces

Graboplast has 3 surface solutions: **TECH Surface**, **PUR Surface** and **CLP**. When creating these, our aim was to develop top layers with better durability and better cleanability.

TECH SURFACE

This patented procedure we use in our graboSport range and Stamina. These products are easy to clean and durable due to PUR and micronised Al₂O₃ particles.

PUR SURFACE

PUR Surface is our latest development which we apply in our Gymfit range. It contributes to the attractive look of these floorings and simplifies their cleaning.

CLP

CLP is a special cross linked polymer in the cross-section of the wear layer which makes the cleaning easier and increases the life expectancy of the floor.
